

# KDFM eXplorer

## MAIN BENEFITS:

- Simplification of the management processes
- Higher profitability on customers contracts
- Eliminate stock of supplies at customer's site
- Remote device troubleshooting
- Forecast of supplies expenses over the months
- Positive impact on environment

**KDFM eXplorer** is a complete and advanced remote print management solution. Its unique ease of use, reliability of data flow, security and flexibility make it one of the best choices for any dealer managing a fleet of printing devices at customers' premises, that wants to improve service levels while reducing costs.

## KEY CAPABILITIES:

- Remote monitoring of **all** print fleet, any brand and model
- Automatic data collection from managed and non-managed networked printing devices.
- **Alert management** and reporting on consumables (levels, prediction in pages or days) and maintenance (service codes)
- **Device Web Access:** Access to the web pages of any device from your browser without the need for a remote connection on the customer's network
- **Real time access** to the device status, meters, supplies level, consumption, coverage, duration and frequency of consumable changes with the support of Power Bi Business Intelligence reporting
- Management of cost-per-page and toner-based customers contracts
- Data integration via **API** with external systems, ERP's, etc.
- **Analytics platform** from KDFM eXplorer portal: create very easily or use interactive dashboards and reports in a Business Intelligence environment to support the decisions making process
